Budget and Financial Information

This graph shows the actual total amount the hospital earned as a surplus compared to what it planned to earn. 2010 does not have actual results yet.

This graph shows the hospital's share of the total amount of revenues collected by all Vermont hospitals in 2009.

This graph shows who paid for hospital services by the different payer types (Medicare, Medicaid, commercial insurers, self payers).

This graph shows the hospital's share of all hospital admissions in Vermont in 2009.

Cost Shift

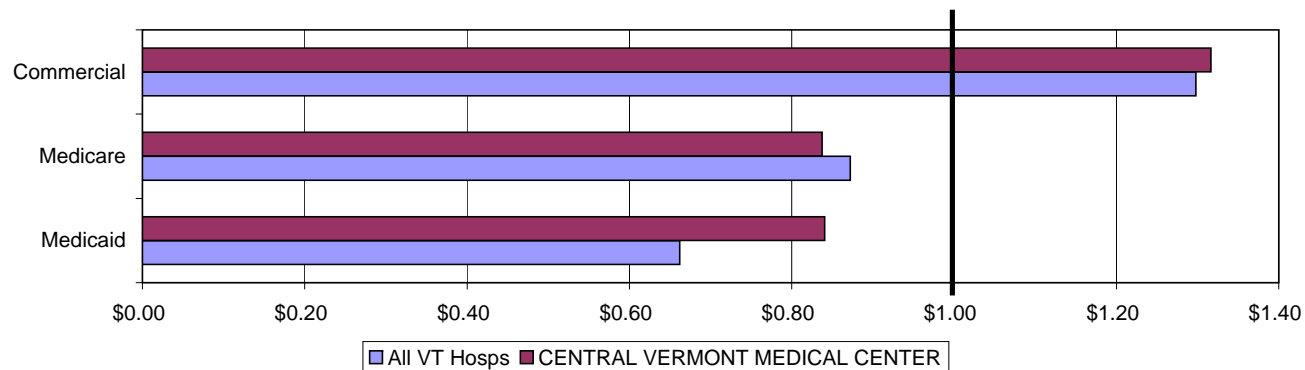

A hospital incurs costs to provide services to their patients. All patients, regardless of their ability to pay, are billed the same price for the same service. Sometimes the payment received by the hospital is less than cost for the services provided. This includes payments from uninsured, Medicare, and Medicaid patients. When the payment doesn't cover the cost to provide those services, this unreimbursed cost is passed on to other payers; this is the "cost shift". The ability to cost shift helps the hospital maintain its financial health.

**Costs Shifted by Payer Type
Actual 2009**

This graph shows the costs shifted by Medicare, Medicaid, and Uncompensated Care to other payers. The top line shows the total cost shift, which is the sum of the costs shifted to others who pay.

**Amount Collected for Each \$1 of Expense and Surplus
Actual 2009**

This graph shows amount of money collected for each dollar of expense and surplus. If a payer (Commercial, Medicare, or Medicaid) is above \$1.00, then it pays more on average than the costs of its patients. If a payer is below \$1.00, then it pays less on average than the costs of its patients.
